What is LIFE CLEAN-AIR?

Collaborative Local and regional Efforts And predictive models for Air quality Improvement and Resilience

The LIFE CLEAN-AIR project addresses the issue of air pollution through the development and implementation of local air quality plans (AQPs) that go beyond current European legislation.

It seeks to implement proactive measures to prevent cities from being forced to activate emergency protocols when pollution exceeds certain thresholds. One of the project's main innovations is the integration of LLULL ENVIRONMENT, an innovative predictive air quality tool capable of forecasting pollution levels with great precision.

Pioneering project in advanced air-quality forecasting.

LIFE CLEAN-AIR adopts a preventive approach, proactively implementing measures to safeguard public health before pollution reaches critical levels.

New members in LIFE CLEAN-AIR consortium

The LIFE CLEAN-AIR consortium closes with three new members: Cascais Ambiente, the municipality of UDINE, and SOGESCA.
