

EVACUATION PLAN FOR THE RESIDENTS OF VILNIUS CITY

Dear residents of Vilnius,

The geopolitical position of Vilnius obliges us to pay much more attention to the city's defence and civil protection, and we are doing so in a targeted manner. The updated evacuation plan is one part of Vilnius Defence Policy Plan. It also includes more measures: from the acquisition of "dragon teeth" for the security of the city to the creation of a drone training area, from the development of shelters to the education of Vilnius residents. I believe that the best defence at the city level is proper preparation of the Municipality and its residents. We must do everything we can to ensure that the enemy would not venture to set their foot.

We want to give residents and visitors of Vilnius a simple guide on what to do if they need to temporarily evacuate their home in the event of a disaster or threat of war. This publication is a small part of an evacuation plan agreed with the responsible authorities to inform residents of Vilnius on what they should do during an evacuation. It is the result of a long, focused and consistent work involving the state authorities, municipal bodies and enterprises, and non-governmental organisations.

We would like to thank the Fire and Rescue Department under the Ministry of the Interior for its advice and the guidelines defined on a national scale. We would also like to thank the municipalities of the host cities for coordinating possible actions. We would like to express appreciation to Vilnius County Chief Police Headquarters for advice on the organisation and principles of prospective flow regulation needed for the preparation of the plan. We would like to thank the Lithuanian Armed Forces for the time allocated for reviewing Vilnius City Evacuation Plan and for their valuable insights into the organisation of routes. We are grateful to the Lithuanian Riflemen's Union for their advice and the opportunity to prepare this plan by anticipating the riflemen's assistance in civil protection in advance. We are grateful to the Lithuanian Red Cross Society for their help in highlighting the role of the movement, humanitarian and voluntary donors in the plan. This cooperation will ensure that when the Day X comes, all institutions will know their role in making the process as smooth as possible.

The personal health care and care institutions subordinate to Vilnius City Municipality Administration or representatives of those providing such services to the residents in their homes were also involved in preparation of the plan in order to assess the number of people to be evacuated and the resources required. In parallel, the principles for the regulation of JUDU traffic lights were established before the evacuation of the city started and the organisation of traffic during the evacuation was assessed, and the first buses were adapted for Vilnius public transport.

The plans are based both on military experience in Ukraine and on knowledge of evacuation practices in the USA in the event of natural disasters. After assessing the maximum number of people to be evacuated from the city, calculations on how we can ensure the evacuation of the entire Vilnius, depending on the direction, were made for different scenarios. The plan is versatile as it discusses the procedures that would also be appropriate for lesser threats and for evacuating the city in parts.

The emergence of this plan does not mean that we need to panic or take action to leave the capital, but knowing what to do during an evacuation is essential. Better preparedness at every level – individual, family, organisation, city and state – can help make any disaster or threat smoother, less difficult and avoid chaos. We invite everyone to take the time to familiarise themselves with the most important information – despite the fact that we hope the plan will never be needed and will only be tested in exercises.

Mayor of Vilnius City

Naldas Bertinuskas

Emergency Plan Activation Based on Type of Evacuation:

- If evacuating using personal transportation 4.1
- If evacuating with municipal assistance 4.2
- If part of a vulnerable population receiving social or home care services 4.3

1. THREATS AND REASONS FOR INITIATING AN EVACUATION

MILITARY INVASION

Entry of hostile military forces into the territory of Lithuania.

HYBRID ATTACKS

Mass migratory flows or border conflicts can disrupt the infrastructure of Vilnius city and cause instability.

This threat is usually linked to coordinated hostile provocations.

NUCLEAR THREATS

For example, the threat of radiation from the Astravets Nuclear Power Plant as the main cloud of pollution moves westwards.

SEVERE NATURAL DISASTERS

Severe storms or other extreme natural phenomena in Eastern Lithuania.

INFRASTRUCTURE EMERGENCIES

For example, a fire in an apartment block, etc.

2. TERMS USED IN THE EVACUATION PLAN

“Self-evacuation” means evacuation to leave the city using own vehicle.

“Evacuation with the help of the Municipality” means evacuation by transport organised by the Municipality. Evacuation is carried out when the residents arrive at the designated assembly points. Residents reach the assembly points on foot or, due to their health condition, are transported.

“Assembly points” mean the initial evacuation points where residents arrive to evacuate with the help of the Municipality. At the assembly points, residents are registered and evacuated to safe areas by special protected transport.

“Intermediate points” mean evacuation points where short-term assistance, i.e. water, food, medical assistance, is provided. Clean clothes and footwear are provided if needed. Intermediate points may also be used to check the chemical or radiological contamination of the population coming from the contaminated area, to carry out sanitation if necessary, to transfer the population to non-contaminated vehicles, and to send the population to reception points.

“Reception points” mean the final evacuation points where the population is provided with essential services and temporary accommodation. They provide the residents with food, water, medicines, hygiene products and clean clothes. The provision of the afore-mentioned services and other essential services is organised by the host municipalities. Reception points may be arranged in collective protection structures.

“Collective protection structures” mean structures or premises that can be adapted to protect the residents from life-threatening or health-threatening hazards during emergencies or war. Specialised collective protection structures can provide full assistance to people with disabilities.

“Helplines” mean special emergency numbers that provide with the most relevant information and support.

“Number 19101” means the hotline of Vilnius City Municipality for consultations on all civil protection issues. In case of an emergency and during evacuation, this line would act as a hotline, providing general information, organising and coordinating evacuation assistance from homes to assembly points.

“Number 111” means the emergency number of the Lithuanian Red Cross Society, which provides humanitarian or psychological assistance and other advice in relation to assistance to residents in case of a single crisis or emergency.

3. EVACUATION PROCESS

01

Receiving an alert**RESIDENTS RECEIVE NOTIFICATIONS OF THE NEED TO EVACUATE THROUGH OFFICIAL SOURCES OF INFORMATION:**

- Radio, TV, social media and the website of the Municipality.
- Notifications are sent via SMS or calls (if emergency lines are activated).

RESIDENTS ARE INFORMED ABOUT:

- The reason for the evacuation (e.g. imminent threat, chemical emergency).
- Assembly points or destinations and routes of self-departure.
- Instructions on what to take with oneself (documents, money, medicines, food, water for 2-3 days, other essentials).
- The need to turn off electricity, water, gas and lock doors when leaving.

02

Departure**IN CASE OF SELF-EVACUATION:**

- Preparation for departure by collecting essential items is carried out.
- Evacuation routes provided by the Municipality are used.
- The designated routes to safe areas are followed.
- The instructions of traffic regulators and services are followed on the road.
- If roadside assistance (e.g. due to breakdowns) is necessary, the emergency line 19101 should be called.

IN CASE OF EVACUATION WITH THE HELP OF THE MUNICIPALITY:

- Residents who do not have transport or need assistance must go to the indicated assembly points.

At the afore-mentioned points:

- Residents are registered.
- Medical and transport assistance are provided.
- Vehicles (buses, etc.) collect residents from the indicated assembly points or, if necessary, directly from their places of residence.
- Full security is ensured during transport.

03

Reaching a safe area or temporary accommodation place**RESIDENTS ARRIVE TO THE DESIGNATED SAFE PLACES INDEPENDENTLY OR BY UTILITY VEHICLES:**

- To temporary accommodation places if the threat lasts more than a few hours or days.
- To collective protection structures adapted to the special needs of the residents (people with disabilities, elderly people, families with young children).

Upon arrival at temporary accommodation places or collective protection structures:

- Primary aid is provided on an as-needed basis (medical, psychological, social assistance).
- Information on next steps is provided.

04

Receipt of information and assistance**RESIDENTS REMAIN IN SAFE PLACES AND ARE REGULARLY NOTIFIED ON THE SITUATION:**

- By notifications to the places of residence.
- Through radio, social media and official information. Further assistance (medical, food catering, psychological) is provided to the residents as needed.

Further assistance (medical, food catering, psychological) is provided to the residents as needed.

05

Return to the places of residence (if allowed)

The return process is organised once the threat has disappeared.

THE RESIDENTS RECEIVE INFORMATION ON:

- Security conditions on return.
- Accessibility to infrastructure.

The return journey is carried out according to the instructions of the Municipality. This will be communicated through official sources of information.

4. TYPES OF EVACUATION AND ACTIONS TO BE TAKEN BY RESIDENTS

The evacuation of Vilnius City is **divided into three types**:

- *self-evacuation (by own vehicle)*
- *evacuations with the help of the Municipality (utility vehicles)*
- *evacuation of people receiving social or nursery services at home*

The types of evacuation in Vilnius City are classified according to the nature and scale of the threat and the ability to independently respond to the emergency. The afore-mentioned classification allows for a flexible and appropriate response to various crises, focusing on rapid mitigation of the impact of the threat and protection of the population.

4.1. ACTIONS TO BE TAKEN BY RESIDENTS DURIN SELF-EVACUATION

01

Tracking information and taking action

- If residents receive an alert from an official source (radio, television, the website of the Municipality or other reliable channels), they must immediately start evacuation actions.
- Residents need to assess whether they are not classified as public service providers and therefore cannot evacuate. In this case, residents must contact their workplace and carry out the functions assigned to them.
- Residents should check the evacuation directions and the nearest departure points against the information re-published through official sources.

02

Getting ready for departure

- Pack the essentials (water, food, first aid, personal documents, mobile phone with a charger, clothes).
- Notify family members or relatives of your planned departure and make arrangements on the meeting point if they cannot travel together.
- Check the condition of the vehicle (fuel level, tyres, roadworthiness).

03

Assistance for vulnerable people

- Where possible, help neighbours or community members who face transport or mobility problems.
- Report such cases on the helpline **19101**.

04

Following with evacuation routes

- Follow the routes indicated by the Municipality, avoiding not checked roads that may be impassable or blocked.
- Where possible, use known and proven alternative routes.
- Comply with the traffic rules and instructions given at traffic control points.

05

Use of shelters and evacuation points

- If indicated, use intermediate evacuation points or shelters located outside the threat area.
- On arrival at an intermediate evacuation point, check in so that the authorities can coordinate further actions and assistance.

06

Communication and information

- Keep in touch with family members and close people, and inform them of your whereabouts.
- Follow additional announcements from the Municipality with updates on the situation or changes in routes.

Guidance for residents

BE PREPARED

Prepare your departure bag in advance and check out the nearest departure routes.

[Departure bag template](#)

STAY CALM

Follow instructions and avoid panic to make the evacuation process as smooth as possible.

PLAN AHEAD

If you have children or pets, if you have elderly or disabled people in your family, make sure they are included in your family plan.

4.2. EVACUATION WITH THE HELP OF THE MUNICIPALITY WITHOUT USING OWN VEHICLE

01

Tracking information and taking action

- If residents receive an alert from an official source (radio, television, the website of the Municipality or other reliable channels), they must immediately start evacuation actions.
- Residents need to assess whether they are not classified as public service providers and therefore cannot evacuate. In this case, residents must contact their workplace and carry out the functions assigned to them.
- Residents should check the evacuation directions and the nearest departure points against the information re-published through official sources.

02

Getting ready for departure

- Pack the essentials (water, food, first aid, personal documents, mobile phone with a charger, clothes).
- Notify family members or relatives of your planned departure and make arrangements on the meeting point if they cannot travel together.

03

Communication with the Municipality

- If assistance (escort or transport) is required during evacuation, residents or their relatives should contact the helpline 19101 as soon as possible, and specify their location, medical condition and other essential information (e.g. due to mobility restrictions).

04

Arrival at the assembly points

- Once instructed, residents should arrive at the nearest assembly point, where they will receive information and be directed to transport as soon as possible. If possible, evacuation will be carried out by rail.
- The assembly points will be announced through official communication channels (radio, TV, the website of the Municipality) and will be visible on the [map](#).

Residents unable to reach the points independently should:

- Wait for the utility vehicle at their place of residence, follow instructions and prepare for departure.
- When utility vehicles (buses) arrive, provide all necessary information to the emergency personnel.
- Follow all instructions for safe boarding and transport.

05

Use of utility vehicle

- Residents will be transported by specialised transport to safe areas or accommodation as instructed.
- It is important to provide information on basic needs and follow the instructions of the emergency services during the travel.

06

Behaviour in temporary accommodation places

- On arrival at the assembly point or accommodation place, residents must register and provide information on their essential needs (additional medical care, food or the need for other measures).
- Follow the instructions of local employees and volunteers, report the existing or new health problems, and ask for help from personal health professionals if necessary.

Guidance for residents**BE PREPARED**

Keep essentials (medicines, water, documents) ready at all times.

[Departure bag template](#)

FOLLOW THE INFORMATION

During an emergency, check notifications of the progress of evacuation and follow instructions.

INFORM YOUR RELATIVES

If possible, inform family members about your condition and whereabouts.

4.3. EVACUATION ACTIONS FOR VULNERABLE RESIDENTS RECEIVING SOCIAL OR NURSERY SERVICES AT HOME

IMPORTANT! Persons receiving social or health services in institutions are evacuated in accordance with the evacuation plans prepared and approved by each institution, which are an integral part of the Emergency Management Plans of each institution. Their content and implementation are coordinated with the Emergency Plan of Vilnius City Municipality and the persons responsible for their implementation and their responsibilities are foreseen in advance.

01

Background information and preparation

- If residents receive an alert from an official source (radio, television, the website of the Municipality or other reliable channels), they must immediately start evacuation actions.
- If residents receiving social or nursery services at home are unable to evacuate on their own with their relatives or other persons, they must contact the social or home health care worker as soon as possible. If this is not possible, they should call the helpline **19101**.
- Residents should prepare the essentials: personal documents, medicines, personal hygiene products, water and snacks. Residents are advised to make arrangements for medical, technical assistance or other supplies in advance.

[Departure bag template](#)

02

Evacuation process

- Residents who are able to reach the nearest assembly point on their own or with the help of others must follow the instructions given by the employees or volunteers who contact them.
- Residents who are able to move around with the help of other persons, but do not have any such assistance, must wait for employees or volunteers to arrive at their residence and escort them to the nearest assembly point after they have reported the need for assistance.
- Residents who are unable to move independently or whose health condition requires special adapted transport, after having notified the need for assistance, must wait for evacuation assistants to arrive at their place of residence and take them by adapted transport to the designated safe areas in accordance with the evacuation plan drawn up by the Municipality.

03

Request for specialised assistance

- On arrival at the assembly point or accommodation place, residents must register and provide information on essential needs (additional need for medical care, food or other resources).
- Follow the instructions of local employees and volunteers, report the existing or new health problems, and ask for help from personal health professionals if necessary.

5. EVACUATION POINTS

Three types of points are activated during an evacuation:

- intermediate,
- reception,
- **assembly.**

It is important for residents to pay attention to **evacuation assembly points**, which are the first important place in the evacuation process. At these points, residents will be taken care of by the persons mandated by the Municipality and will be directed to further points.

The list of points is given in the [table](#) and [map](#) below.

● Assembly points

General functions of points:

Residents are registered.

It provides up-to-date information on further evacuation progress and plans.

Emergency medical and psychological assistance is available if needed.

The population is provided with essential supplies (food, drinking water, medicines and other items) when needed.

Make a note
of the points near your
home, work or other places
you frequent visit.

Meanings of point types:

AP - assembly points

IP - intermediate evacuation points

RP - reception points

6. MAIN DIRECTIONS OF EVACUATION

In Vilnius, three **main directions of evacuation**, corresponding to each possible evacuation scenario, have been identified. These directions have been chosen to minimise traffic congestion and to ensure that the residents can reach the predefined assembly points and intermediate evacuation points as quickly and safely as possible.

Panevėžys and Šiauliai

One of the main directions for the evacuation on Ukmergės Street, ensuring a quick exit **towards the North**. This direction is chosen if the threat is in the southern or central part of the city, or if it is necessary to maintain the movement of Lithuania region to the North where temporary accommodation places are located.

Klaipėda and Kaunas

It provides the main evacuation routes **to the west**, which are used when the central or eastern parts of the city are affected by the emergency, or when it is necessary to move the residents towards the coastal regions where temporary accommodation and relief zones have been set up. The main roads in this direction include the exit via the A1 motorway. This is the main road linking Vilnius to the western regions of the country and is therefore considered as a reliable route for a quick retreat to safe areas.

Alytus and Poland Border directions

The third evacuation direction is **southbound through** the routes of Savanorių street, Gariūnai street, Liepkalnio street and Eišiškių highway routes. This direction is used when there is a high flow of traffic from the southern and eastern districts of the city or when it is necessary to make a quick exit to the southern regions of Lithuania.

6.1. EVACUATION ROUTES IN VILNIUS CITY

6.1. EVACUATION ROUTES IN VILNIUS CITY

This section presents the **main evacuation routes for each subdistrict**, depending on the evacuation scenario and the infrastructure used.

The described routes are provided as the **main directions that residents should use during an evacuation**. Streets and roads used to access the main corridors are not described in detail. In the event of a situation where the main corridor becomes inaccessible due to damage to infrastructure, traffic congestions or other unforeseen circumstances, the responsible authorities of the Municipality will immediately announce alternative routes or other evacuation directions.

Alternative routes will be announced through public information dissemination, including announcements on radio and TV channels, social media, the website of the Municipality, as well as through direct information messages at evacuation points. **Alternative directions will ensure that the residents can safely leave the city**, avoiding inaccessible routes or infrastructure bottlenecks.

It is important to note that the evacuation process is dynamic, so all the shown directions may be adjusted according to the situation to ensure the safety of the residents and the as smooth traffic flow as possible.

SCENARIO I

Evacuation in Panevėžys, Šiauliai directions

Threats triggering the scenario:

Military invasion from the south-east

Hybrid attack (mass migration, border conflicts)

Nuclear threats from Visaginas Nuclear Power Plant or Astravets Nuclear Power Plant

Depending on which subdistrict in which you live, work or spend a lot of time, you can find out about the routes in advance.

6.2. FURTHER EVACUATION DIRECTIONS OUTSIDE VILNIUS CITY

6.2. FURTHER EVACUATION DIRECTIONS OUTSIDE VILNIUS CITY

This section shows the main routes that residents should take to continue their evacuation outside Vilnius City. **The routes are organised according to the main directions:** Panevėžys and Šiauliai, Kaunas and Klaipėda, Alytus and the Polish border.

The evacuation routes are classified into **MAIN CORRIDORS (green)**, which are intended for the primary traffic flow, and **ALTERNATIVE ROUTES (red)**, which are intended for use in emergencies when the main roads become inaccessible.

Intermediate points along the main corridors, serving as distribution centres, traffic control points or assistance points are also included.

- For each route, **Google Maps navigation links** are provided next to the route description.
- **One-way traffic** in the main corridors is ensured to avoid congestion and improve capacity. If necessary, roads can be closed to opposing traffic and their infrastructure adapted to accommodate heavy traffic flows.
- If residents are unable to use the main corridor, they must follow the signs for **alternative routes**. Alternative routes are available on roads adjacent to the main corridor, which may be less congested, but it is important to strictly follow the instructions of traffic regulators.
- **Connecting roads** (blue) link the main evacuation corridors with alternative corridors, allowing residents to choose alternative evacuation directions if necessary. It is important to note that the connecting roads are designed to make use of the existing infrastructure and therefore must be strictly used in the direction of the arrow to avoid congestion and ensure traffic safety.
- The use of these roads will be regulated **at traffic control** points, where officers will direct flows according to the priority directions and the existing road situation. Residents travelling on the connecting roads must carefully follow road signs and the instructions of traffic controllers.

EVACUATION ROUTES	DIRECTIONS	EVACUATION ROAD NOS.	INTERMEDIATE POINTS	SHORT DESCRIPTION OF INTERMEDIATE POINTS
MAIN CORRIDOR	From Vilnius, Ukmergės Street and the Western Bypass connect to the A2 motorway. Onward movement: once traffic reaches Panevėžys, it can be diverted towards Šiauliai or neighbouring districts. Link to the route	A2 Vilnius – Panevėžys	Putiniškės	The first identified distribution point where traffic flow can be regulated to avoid congestion.
			Širvintos	A distribution point where rest or intermediate evacuation points may be arranged.
			Rimučiai	An important road segment before arriving in Panevėžys.
ALTERNATIVE DIRECTIONS	Direction via Kernavė. Link to the route	No 171, No 116, No 4306, No 4305	Dūkštos	A small but important point to reach Musninkai.
	Directions via Maišiagala and Širvintos. Link to the route	No 5214, No 5217, No 4301, No 115	Musninkai	A point where the residents can be redistributed towards Paširvintis or other areas.
			Maišiagala	A regional point from where you can move towards Pikeliškės or merge back into A2.
	Directions via Paberžė and Giedraičiai. Link to the route	A14, No 172, No 2804	Širvintos	A regional point from where you can move towards Giedraičiai or merge back into A2.
	Direction via Molėtai. Link to the route	A14	Giedraičiai	A regional point from where you can move towards Širvintos or Molėtai.
			Molėtai	A distribution point for evacuations to the north or east.

(B) MAIN DIRECTION TO PANEVĖŽYS VIA UKMERGĖS STREET AND A2

EVACUATION ROUTES	DIRECTIONS	EVACUATION ROAD NOS.	INTERMEDIATE POINTS	SHORT DESCRIPTION OF INTERMEDIATE POINTS
MAIN CORRIDOR	Exit via the main roads of Vilnius City: Savanorių pr., Gariūnų g., Oslo g., Tūkstantmečio g., connecting resident flows to the road A1. Onward movement: after reaching Kaunas, flows are diverted further south-west towards Klaipėda via A1 or via A5 towards Marijampolė and southern Lithuania. Link to the route	A1 Vilnius – Kaunas – Klaipėda	Grigiškės	A distribution point where traffic can be diverted to alternative routes (e.g. Lentvaris or Trakai).
			Vievis	A distribution point to optimise traffic flows and ensure smooth exits to Kaunas.
			Elektrėnai	A possible assistance point where rest areas and coordination points can be set up to direct traffic towards Jonava.
			Žiežmariai ir Antakalnis	A distribution point where traffic can be diverted to alternative routes (e.g. Kaišiadorys, Jonava or Alytus directions).
			Note: The connection between Dėdeliškės and Sudervė is prospective, with additional infrastructure planned.	
ALTERNATIVE DIRECTIONS	Directions via Aukštadvaris. Link to the route	No. A4, No A6, No 130	Trakai	A distribution point where the connecting roads from Grigiškės, Rykantai and Vievis converge.
			Prienai	An important distribution point connecting Alytus and Kaunas by road.
	Directions via Jonava. Link to the route	No 171, No 116, No 4306, No 1502, No 143, No 1801	Musninkai	A point where the population can be redistributed towards Širvintos or Jonava.
			Gegužinė	The point where the connecting roads from Elektrėnai and Kaišiadorys connect.

EVACUATION ROUTES	DIRECTIONS	EVACUATION ROAD NOS.	INTERMEDIATE POINTS	SHORT DESCRIPTION OF INTERMEDIATE POINTS
MAIN CORRIDOR	Exit from Vilnius city via Savanorių pr. or Kirtimų g., connecting to the roads A4 and No 128 to Alytus. Onward movement: once Alytus is finally reached, traffic flows will be further diverted to the correct directions. Link to the route	A4 Vilnius – Varena - Grodno 128 Valkininkai GS – Daugai – Alytus	Paluknys	A distribution point where flows can be diverted to alternative routes (e.g. the River Strėva towards Aukštadvaris or Baltoji Vokė towards Eišiškės).
			Puodžiai	A distribution point where traffic can be diverted to alternative routes (e.g. in the direction of Aukštadvaris or in the direction of Senoji Varėna).
			Daugai	A possible assistance point where rest areas and coordination points can be set up to direct traffic towards Jieznas.
ALTERNATIVE DIRECTIONS	Directions via Merkinė. Link to the route	No. A15 No 126, No 127, A4	Jašiūnai	A distribution point where the connecting roads from Baltoji Vokė and the motorway A15 connect.
			Senoji Varėna	An important distribution point on the motorway A4.
	Directions via Aukštadvaris. Link to the route	No A4, No A16	Trakai	There may be a assistance point where rest areas and coordination points can be set up.
			Aukštadvaris	There may be a helpdesk where rest areas and coordination points can be set up.

(B) MAIN DIRECTION TO ALYTUS

EVACUATION ROUTES	DIRECTIONS	EVACUATION ROAD NOS.	INTERMEDIATE POINTS	SHORT DESCRIPTION OF INTERMEDIATE POINTS
MAIN CORRIDOR	The main corridors in this direction are the motorways A4, A16 and A5, which provide direct and fast access to the Polish Border. Residents within Vilnius City connect the motorway A4 via Savanorių pr. or Kirtimų g. Onward movement: Once at the Polish Border is reached, transport flows are further distributed to various Polish cities or transit routes, depending on the evacuation objectives and situation. Link to the route	A4 Vilnius – Varena – Grodno A16 Vilnius – Prienai – Marijampolė A5 Kaunas – Marijampolė – Suwałki	Trakai	Trakai is the first intermediate point close to Vilnius, linking the traffic flows of Vilnius to the main corridor. Possible redistributions via connecting roads towards Vievis and Šventininkai.
			Jieznas	A distribution point designed to optimise traffic flows and ensure smooth exits to Marijampolė, Kaunas, Alytus and Daugava.
			Marijampolė	Marijampolė is one of the most important distribution points before reaching the Polish border. It is of strategic importance for the region's transport infrastructure.
ALTERNATIVE DIRECTIONS	Directions via Lazdijai. Link to the route	No. A4 No 12B, No 132, No 135	Alytus	A distribution point from where flows can be redirected towards Lazdijai or other border areas.
			Lazdijai	An intermediate point for traffic flows to the border.
	Directions via Kaunas. Link to the route	No A1 No A5	Kaunas	One of the largest distribution points between Vilnius and the Polish border in the alternative direction. The city is strategically important both for its infrastructure and for the possibility to redistribute flows.

7. PRINCIPLES OF COMMUNITY AND MUTUAL ASSISTANCE

The principles of a focused community are an essential part of every evacuation plan. Find out how community members can meaningfully participate in emergency processes, ensuring a better response to crises and helping to avoid chaos that could lead to negative consequences for their own or others' safety, health or well-being.

Sharing information

- Notify your family, relatives or friends when an evacuation is announced.
- Make sure your relatives know the basic evacuation routes and procedures.
- Call your elderly or mobility-impaired relatives and ask if they need help.

Assistance for neighbours

- Ask people living nearby if they need help. Also share information about the situation and what you need to do at home. If necessary, help them to get to the nearest assembly point or help pack their essentials.
- Be particularly aware if there are elderly people living alone, people with disabilities or families with young children in your neighbourhood.

Conscious behaviour during evacuation

- Help to keep order and follow instructions, whether you are travelling by transport, are at assembly points or in temporary accommodation place. Bending of another person and pushing ahead can cause difficulties for you and others in the vicinity.
- If you are able to evacuate on your own using your own transport, do not go to assembly points.
- Offer to give a lift to a neighbour or another member of the community if you have a spare seat in your vehicle.

Helping people with disabilities

- If you know of people with severe disabilities who will not be able to evacuate on their own due to their health condition or need to move around in adapted transport, please inform us of their need for assistance by calling our helpline **19101**.
- Direct them to the nearest assembly points or coordinate their arrival.

Getting ready

- Encourage family, friends and neighbours to prepare for evacuation in advance, pack a bag of essentials and have valid documents. [Departure bag template](#)
- Take care of your pets by having a supply of dry food, bedding and a transport box. Put a sign around the neck with the pet's name and contact details of two persons
- Prepare and invite others to have a discussed and completed family plan, with contacts for all relatives, marked assembly points nearest to home or work, clear agreements on the evacuation course of action, and known evacuation routes if self-evacuation is planned.

Setting an example

- Try to stay calm and aware, and think about the steps you need to take to stay safe.
- Do not take any action that contradicts instructions given through reliable channels, as you may harm yourself or encourage others to act carelessly.

8. COMMUNICATION DURING EVACUATION

8.1. INFORMING THE RESIDENTS

During an evacuation, it is important to ensure that accurate and clear information is available to help residents make the right decisions. Information to the residents will be organised in phases, depending on the evolution of the situation, to ensure full preparedness and smooth actions.

Once the evacuation process is underway, the residents will be immediately informed of the situation through official information channels. The first announcement will be aimed at defining the nature of the emergency, indicating the need for evacuation and providing basic information on evacuation routes. Residents will receive notifications giving specific instructions according to their location, such as routes designated for the municipality, assembly and intermediate evacuation points, evacuation times. Residents will be informed about possible traffic restrictions, diversions and priority routes. The above information will be published in real time with regular updates of the traffic situation.

During an emergency information to the residents is provided by:

Sirens and audible signals

Sirens are the main means of mass alerting the residents. Vilnius City has a centrally controlled siren system. When the sirens are activated, residents are encouraged to turn on the radio or television for additional information.

Telephone messages

All residents of Vilnius City using mobile phones will receive automatic notifications about the emergency and evacuation actions. Residents need to make sure their phone has the notification function activated.

Radio and television

Radio stations (M-1, Radiocentras, LRT), LRT TV channels will be used to provide information on the situation and the necessary actions. Evacuation directions and other relevant information will be provided.

Information on notice boards

The information will be displayed on city notice boards or in other strategic places.

Informing vulnerable groups

People receiving social or nursery services at home will also be contacted and provided with additional information about the evacuation by staff providing direct services.

8.2. COMMUNICATION CHANNELS FOR RESIDENTS

In order to ensure convenient and fast access to information for all residents, Vilnius City Municipality will provide a range of channels for accessing and communicating information, **which will include the following:**

> Official sources of information

Website of Vilnius City Municipality: residents will be able to find up-to-date information on the evacuation process, scenarios, main routes and intermediate evacuation points. An interactive evacuation [map](#) will also be regularly updated on the website vilnius.lt.

Social media: the [Facebook](#) and [Instagram](#) accounts of the Municipality will be updated with updates on the situation.

> Helplines

The **number 19101** is the hotline Vilnius City Municipality for consultations on all issues related to civil protection. In the event of an emergency and during the organisation of an evacuation, this line would act as a hotline, providing general information, organising and coordinating evacuation assistance from homes to assembly points.

The **number 111** is the emergency number of the Lithuanian Red Cross Society, which provides humanitarian or psychological assistance and other advice in case of a single crisis or emergency.
